

## The world's novelty from Bauerfeind:

The first caring compression stocking which demonstrable prevents varicose veins.

„No more itching, no dry skin or unpleasant feelings – but instead wellness for your legs.“

## With the Venotrain® micro balance three wishes of your legs come true:

- alleviation of the itchiness
- no more dry, rough or scaling skin
- highest wearing comfort with optimal anti-haemostatic effect

time-consuming  
creaming is no  
longer necessary

If it's about the right medical compression stocking, your skin now has a say in it. The new Venotrain® micro balance is a medical compression stocking with a rich and lavish balsamic emulsion for the first time ever. This has a decisive anti-haemostatic effect on your legs and will take care of them in an optimal way. When wearing the new Venotrain® micro balance regularly, your legs can anticipate every wish of your skin.

## Often irritated in the past. Just smooth now.

- Squalane, the caring substance extracted from olive oil, keeps the skin's moisture in balance.
- Extracts of the Tahitian Tiare flower (Monoi de Tahiti) makes the legs gentle and tender.
- Passion fruit seed oil has a soothing effect and relieves skin tension.
- Vitamin E and vitamin E acetate protect your skin from premature aging.
- Natural, moisture-rising urea stimulates the regeneration of the skin cells.

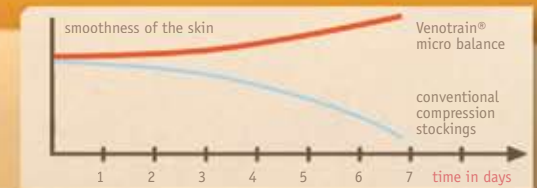

All ingredients are biologically degradable and dermatologically tested.

## Clinically tested: skin improvements within one week

Prof. Dr. med. Michael Jünger,  
Head of the Dermatological Clinic of  
Greifswald University, recommends  
Venotrain® micro balance:

„In our study with 42 patients the typical side effects of conventional medical compression stockings such as drying out of the skin, itchiness of the skin or becoming scaly have been avoided by regularly wearing Venotrain® micro balance. As a result of continuously providing the skin with caring substances from the medical compression stocking, signs of roughness on the skin diagnosed even before wearing medical compression stockings have vanished completely within a week. From the results of this prospective controlled study we can conclude that also patients with a sensitive skin which is prone to drying out easily will benefit from wearing Venotrain® micro balance.“

## With Venotrain® micro balance patients appreciated that:

- the skin retains its moisture
- the surface of the skin becomes smoother and more gentle
- the heat and moisture circulation is most optimal with the stockings
- the stockings are easier to put on
- the legs are less tightly constrained.

## It's a huge healing power working for you.

Imagine wearing Venotrain® micro balance is as if thousand and thousand little helpers put an emulsion on your skin **every day without you having to bother.** The fibers of the Venotrain® micro balance do exactly that for you. The secret is their special quality, as this allows the **active substances** to envelope each single fiber without putting an extra load on the fabric or without compromising on breathability. The skin can breathe again. **The heat gets discharged.** And you can enjoy the day again.

## The Reload Principle – spraying easier than applying an emulsion.

Wear your medical compression stockings every day. The Venotrain® micro balance gradually releases the integrated **care substances** to your skin only. Depending on skin type, the effect of the active substances will wear off after you have worn and washed the stockings several times. **Then you can restore your stocking's healing effect immediately with the reload emulsion.** This is as comfortable as the stockings' wearing properties themselves: simply spray the stocking in the evening and your legs will feel fit again the next day.
